COLLEGE CODE: 1133

COLLEGE NAME: VELAMMAL INSTITUTE OF TECHNOLOGY

DEPARTMENT: ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

STUDENT NM-ID: aut113323aia29

ROLL NO: 113323243056

DATE: 03.05.25

Completed the project named as,

Cost Estimation and Budget Analysis

SUBMITTED BY,

NAME: MOHAMMED ALI.A

MOBILE.NO: 9345580472

Phase 4: Performance of the Project

Title: Cost Estimation and Budget Analysis

Objective:

The aim of this stage is to make a thorough analysis of the financial structure of the project by estimating costs, budget planning, and measuring financial performance. Proper cost estimation and strategic budgeting are essential for effective management of resources and ensuring the financial viability of the project. **1. Cost Identification and Categorization**

Overview:

This stage involves recognizing and categorizing all potential costs associated with the project.

Performance Improvements:

Direct Costs:

- Procurement of hardware components
- Purchase of software tools and licenses
- Salaries and wages of project team members

Indirect Costs:

- Administrative overheads
- Office utilities and internet expenses
- Staff training and development programs

Outcome:

Cost components are clearly defined and categorized, facilitating precise tracking and budgeting.

2. Cost Estimation Models

Overview:

Different models were used to estimate the overall cost based on available data and scope.

Performance Improvements:

Analogous Estimating:

- Used cost data from similar past projects to predict future expenditures.

Parametric Estimating:

- Used cost per unit/time measures (e.g., cost per development hour).

Outcome:
These models provided a range of cost projections, increasing the robustness of financial planning.

3. Budget Planning and Allocation

Overview:
After cost estimation, a detailed budget was planned and resources were allocated accordingly.

Performance Improvements:

- The total budget was divided by project phases: planning, development, testing, deployment.
- Departments and teams were allocated funds based on resource needs.
- A contingency fund (typically 10-15%) was reserved to address unexpected costs.

Outcome:
Effective budget planning helped ensure adequate funding throughout the project lifecycle.

4. Budget Monitoring and Adjustments

Overview:
To maintain financial discipline, continuous monitoring and adjustments were made.

Actions Taken:

- Budget tracking tools like Microsoft Excel and project management dashboards were used.
- Monthly reviews compared estimated costs vs actual expenses.
- Variations were analyzed and budgets adjusted dynamically.

Outcome:
This approach prevented overspending and optimized fund utilization.

5. Performance Metrics Collection

Overview:
Financial performance metrics were gathered and analyzed to measure cost efficiency.

Key Metrics:

- Cost Variance (CV) = Earned Value (EV) - Actual Cost (AC)
- Schedule Variance (SV) = EV - Planned Value (PV)
- Cost Performance Index (CPI) = EV / AC

Outcome:
These indicators allowed early detection of financial risks and informed timely decisions.

Key Challenges in Phase 4

Challenge 1: Inaccurate Forecasts

- Issue: Initial estimates deviated due to changing requirements.
- Mitigation: Continuous feedback loop and rolling-wave planning.

Challenge 2: Hidden Costs

- Issue: Some indirect expenses were overlooked initially.
- Mitigation: Conducted risk analysis to anticipate hidden costs.

Challenge 3: Tool Limitations

- Issue: Budget tracking tools lacked integration.
- Mitigation: Adopted integrated tools with APIs for automation.

Outcomes of Phase 4

1. Accurate and comprehensive cost estimations

2. Strategic and balanced budget allocations
3. Real-time budget tracking with adaptive planning
4. Informed decision-making based on financial metrics
5. Improved preparedness for scale and scope changes

Next Steps for Finalization

The final phase will focus on deployment, post-deployment cost tracking, and refining estimation models using real-world data. Additionally, lessons learned from budget deviations will be documented to enhance future planning.

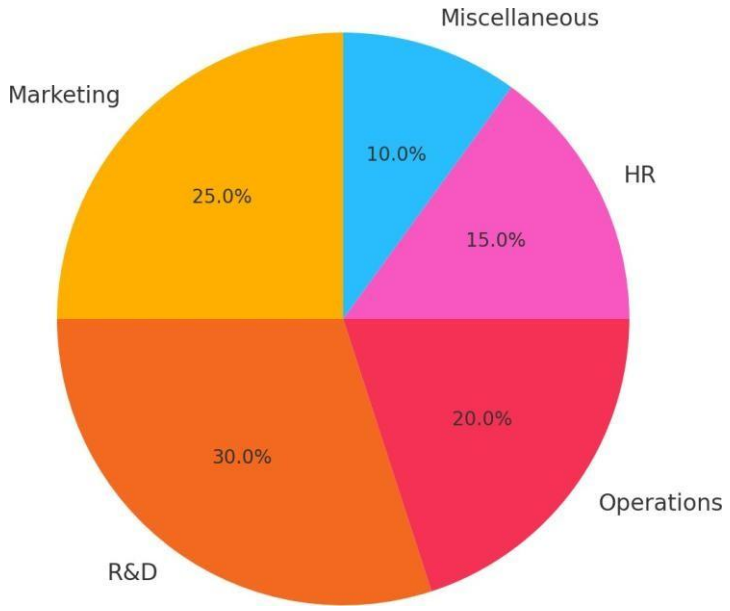
Cost Estimation and Budget Analysis - Python Visualization

1. Budget Allocation (Pie Chart)

```
# Pie Chart: Budget Allocation import
matplotlib.pyplot as plt

labels = ['Marketing', 'R&D', 'Operations', 'HR', 'Miscellaneous']
sizes = [25, 30, 20, 15, 10]

fig1, ax1 = plt.subplots() ax1.pie(sizes, labels=labels, autopct='%1.1f%%',
startangle=90) ax1.axis('equal') # Equal aspect ratio ensures that pie is
drawn as a circle.
plt.show()
```



2. Cost Estimation by Department (Bar Chart)

Bar Chart: Cost Estimation by Department import matplotlib.pyplot as plt

departments = ['Marketing', 'R&D', 'Operations', 'HR', 'IT'] costs = [12000, 15000, 10000, 8000, 9000]

fig2, ax2 = plt.subplots() ax2.bar(departments, costs, color='skyblue') ax2.set_ylabel('Cost in USD') ax2.set_title('Department-wise Cost Estimation') plt.show()
